VH-1300

High rigidity, high-precision structure design

- The major construction parts are based on Meehanite cast iron, which is stable in structure and long-term quality is assured.
- Casting parts are calculated and analyzed by the finite element method. Proper structure strength combined with enhanced ribs provides high rigidity for the machine.
- A linear guideway is applied on the 3-axes, supporting heavy loads, rapid moving, and assuring precise positioning.

- A wide base, box-shaped column, enhanced saddle, full span supports for heavy loads, and robust structure all contribute to its ability for heavy duty machining.
- Enhanced ribs inside the spindle head and a proper contact length ratio between the spindle head and column provide solid support for the spindle.

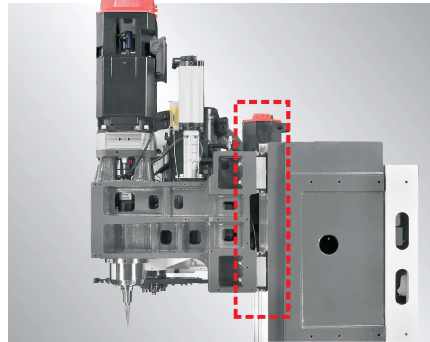

Linear Guideway with High Speed and High Precision

Linear guide way

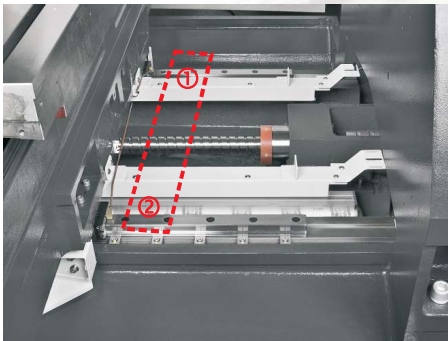

- A linear guideway with zero backlash ensures a consistent cutting surface on curved or tilted surfaces.
- Suitable for high speed operation and the horsepower requirement is minimized.
- By using rolling contact instead of sliding contact, the linear guide reduces the friction loss and increases the sensitivity and positioning precision.

Extended Z axis linear way blocks

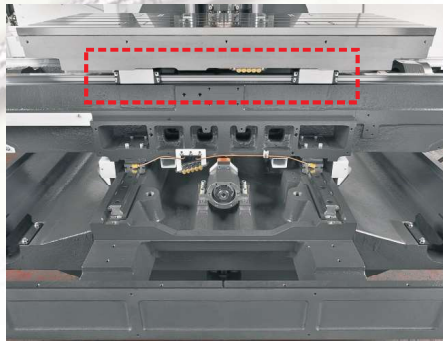

- Extended linear guide way blocks provide the better stability and rigidity.

Y axis with two linear guide ways and four linear guide way blocks

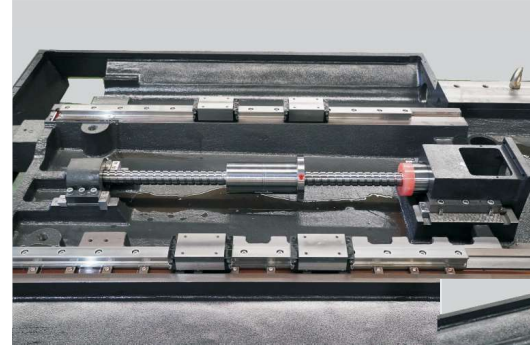

- The machine is equipped with a collision protection device which can absorb collisions due to machine malfunctions or mistakes made by operators. The damage caused by the collision can be minimized and still maintain the design precision.

X axis with two linear guide ways and four linear guide way blocks

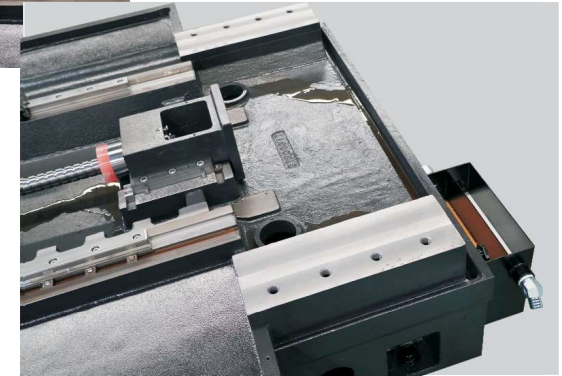

- The X/Y/Z-axis can be equipped with a linear scale system to detect thermal displacement due to rapid movement of the machine. The thermal displacement result will be sent to the controller for compensation, suitable for high precision parts machining.
- The linear scale system is designed with a gas protection device to prevent the linear scale from contamination by dust and oil vapor. The precision of the linear scale is assured and the service time can be extended.

Oil/Coolant Separating Design

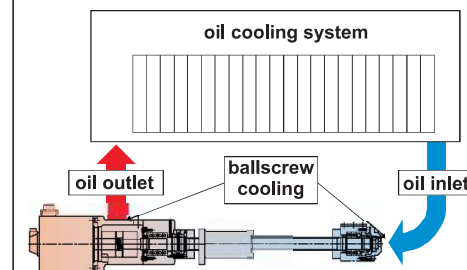

- The oil/coolant separating design can separate lubricating oil and coolant effectively. Coolant quality will not be reduced due to mixing and the machining quality can be assured.

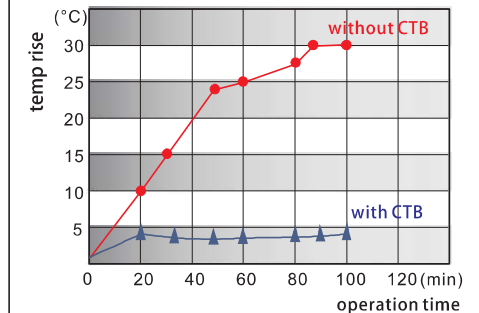

3-axis coolant through OP

The ballscrew transmission system employs hollow cooling design to minimize heat and thermal expansion of ball screw in high-speed operations with coolant oil to balance high speed and high precision at the same time.

Effectiveness Graph

Spindle Transmission

Direct-drive system

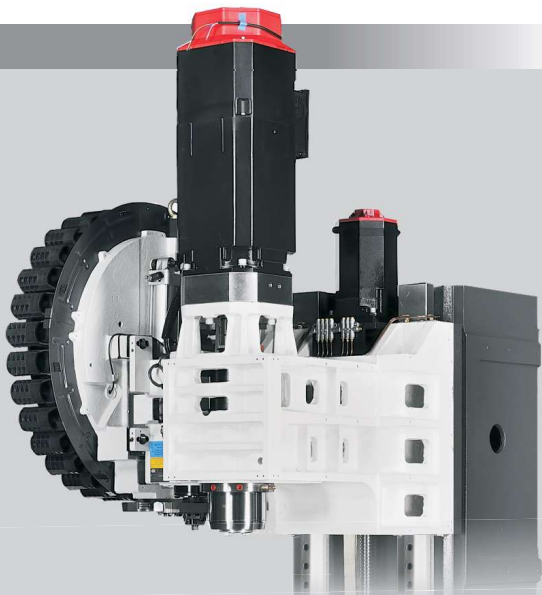

Machine Specifications

Spindle Speed:12000rpm
15000rpm **OP**

Spindle Power: 11/15kw
15/18.5kw

Spindle Torque: 70/95.5 N-m
102/126 N-m

Tool specification:BBT-40

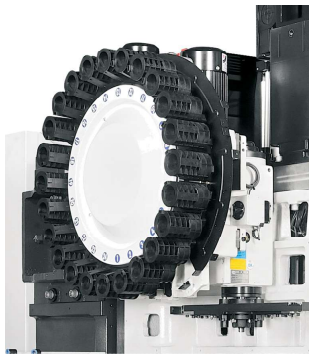

Arm-type Tool Changing Mechanism

- A fast, simple, reliable, and durable tool exchange device, providing stable and reliable exchange of tools.
- A unique tool exchange device design, an advanced cam-drive mechanism capable of random tool selection can be achieved using the PLC software control.

24 tools

32 tools **OP**

Build-in spindle **OP**

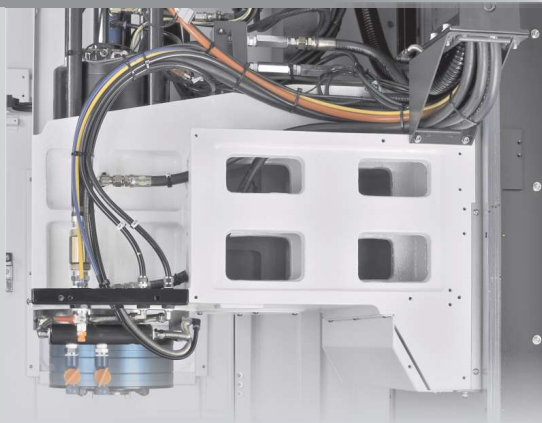

Machine Specifications

Spindle Speed:15000rpm
20000rpm **OP**

Spindle Power: 11/15kw
15/18.5kw

Spindle Torque: 69.9/95.5 N-m
63.7/78.3 N-m

Tool specification: HSK-63A

Mode	Number of Tools	Tool specification	Max. tool length (mm)	Max. tool dia. (mm)

VH-1000A	24T	BBT-40	300	80/150
VH 1100A	24T	BBT-40	300	80/150
VH-1300A	24T	BBT-40	300	80/150

Standard Function - Optional Function

Machine

1 Lighting System

High brightness work light is standard for easy loading and unloading work from the table.

2 Portable MPG

Portable hand wheel beneficial to operation flexibility.

3 Full enclosed ATC

Full enclosed ATC design to prevent dust or oil mist go inside the ATC area.

4 Tool Length Measurement OP

The automatic tool measuring system will measure the tool length and input the result into the controller automatically for compensation.

5 Workpiece Measurement System OP

Select Renishaw Workpiece Measurement System for use
•MP10 is used for workpiece coordinate setting and processing machine workpiece inspection.
•0MM module is able to send CNC message and receive from M12 interface

System characteristics

- Signal transmission range: MP10 is used for 3degree or 70 degree, minimum at 130 degree
- 360-degree inspection is limited to a maximum length of 6m.
- Battery lifetime allows continuous use for 140 hours.
- Repeatability 1μm, Measurement speed: 480 mm/min.
- Measurement can use M code or automatic measurement
- Waterproof at IP68 level.
- Equipped with over-stroke probe damage protection.

6 Auto power ON for machine warm-up Auto power Off

Operator can set power On timing and activate the warm-up program by timer, as well as power Off.

7 3 color signal light

8 Safety switch (standard)

The machining program starts only when the safety door is closed to ensure operator safety.

9 DDR Motor OP

The embedded rotating 4th axis has the features of high rotating speed, high precision, high maximum torque, high braking torque and zero backlash, suitable for precision parts machining with high performance.

Coolant

10 Programmable nozzle adjustment device OP

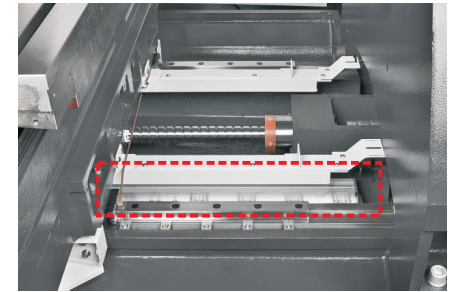

Programmable nozzle adjusting device: you may add M code in machining scripts to change nozzle angle according to tool length during machining.

11 Coolant through spindle device and filter OP

With the addition of the coolant through spindle system, the cutting coolant passes through the center of the spindle and is ejected at the tip of cutter to directly cool the workpiece and the cutting blade of the cutter by removing the heat generated from cutting in order to ensure excellent cutting quality, and it is suitable for component parts of deep hole processing.

12 High Precision Linear Scale OP

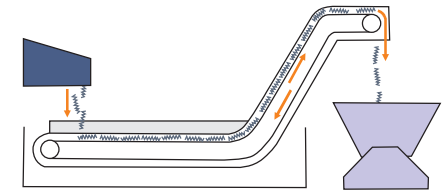

The X/Y/Z-axis can be equipped with a linear scale system to detect thermal displacement due to rapid movement of the machine. The thermal displacement result will be sent to the controller for compensation, suitable for high precision parts machining.

Chip Management

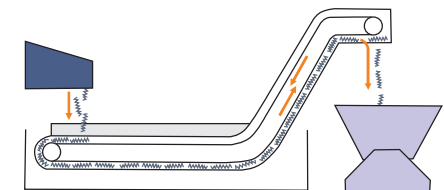

13 chain type chip conveyor OP

Suitable for chip length from 30-150mm

14 scraper type chip conveyor OP

scraper type chip conveyor can remove the long and curl chips through outer channel; and remove the coolant and small chips through inner channel.

Standard Function - Optional Function

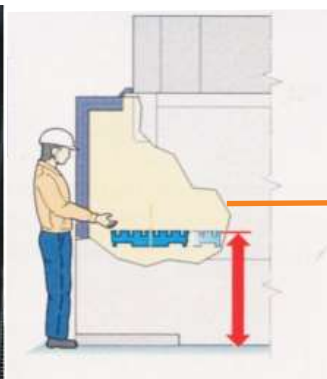

Front and top door in one piece.

Wide opened front for easier loading/unloading.

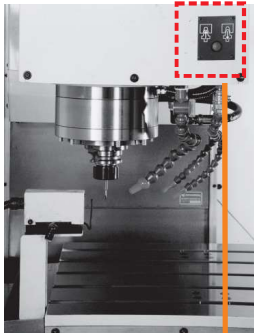

Operator close to table and spindle.

Operator can easily approach workpiece.

Based on ergonomics ,
easy operation and
maintenance
ishighlighted indesign.

Tool clamp/unclamp button

Operator can easily
clamp or unclamp
the tool from the
front.

Rotatable operation panel

Ergonomic operation
panel design.

Full ATC guard

Full ATC guarding
can prevent dust or
chip go inside
the ATC.

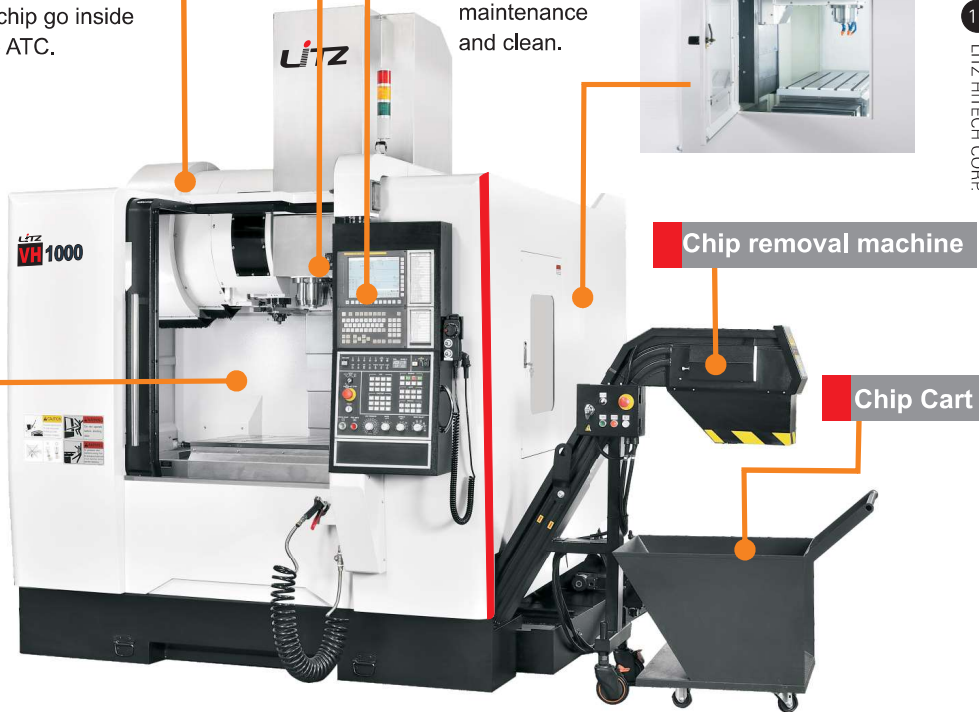

Removable side doors.

Removable side
doors help easier
maintenance
and clean.
